

ADB (African Development Bank)

Located in Abidjan, the headquarter of African Development Bank owns a refrigeration production station for its offices air conditioning.

4 refrigerating units of 405 kW secure this production, completed by air-processed refrigerating cooling units.

CONFIGURATION OF THE 4 REFRIGERATING UNITS

Each refrigerating unit is equipped of:

- 1 CM 1000 A protecting circuit-breaker engine
- 1 starter of 450 KW with a 760 A cut-out system
- 1 LT8 PH electronic protection
- 1 TSX 17 automatic system for controlling starting; managing set up defects and monitoring defects, linked through FIP network to the other automatic systems for cooling management

COMPLETING REFRIGERATING UNITS

- 1 set for set up management by ALTISTART 22 kW for the cooling runs
- 1 set of automated box for sector-based management
- 1 TSX 47 TPMX automatic regulating system for temperature management and refrigerating box ventilation
- 1 TSX 47 automatic set animation concentrator of the synoptic
- 1 GTC monitoring (Technical Centralised Management) by MONITOR PRO on a PC enables through the network of automatic units to centralise and operate the whole set
